

EPFO Remake — QA Testing Guide

How to test the 5 newly deployed features

Live URL: <https://epfo-remake-openai.vercel.app>

Feature 1 — Employer Approval Visibility

- 1 Go through onboarding → choose **Smart Flow** → type "withdraw my PF for medical emergency"
- 2 Complete all 5 steps (enter bank digits **1234**, select purpose, enter amount **50000**, enter OTP **1234**)
- 3 After OTP submission, you'll see a "Pending Employer Approval" timeline instead of "All Steps Completed"
- 4 Check the dashboard — the task shows a blue "Pending Employer" badge
- 5 Go to **History** (/history) — the pending task appears with timeline, progress bar, and "Send Reminder" button
- 6 Wait, or let it show the SLA-exceeded state to see the "Escalate via Grievance" CTA

Feature 2 — KYC Mismatch Tile

- 1 Dashboard → **Traditional Flow** → click the "Fix KYC Mismatch" tile (fuchsia, last row)
- 2 It launches the smart-flow directly with 4 steps: verify → analyze mismatch → draft declaration → OTP submit

Feature 3 — Grievance Enhancement

- 1 Type "my claim was rejected" or click the "Why was my claim rejected?" quick question
- 2 After the verify + analyze steps, you'll see a "Select the type of grievance" dropdown
- 3 Pick "Employer not depositing contributions" → an employer name field appears, plus a 15-day SLA note
- 4 After ticket generation, you'll see auto-escalation info
- 5 On the standalone **/grievance** page → Track tab → a context callout shows for employer non-deposit tickets

Feature 4 — Merge Duplicate Accounts

- 1 Dashboard → **Traditional Flow** → click the "Merge Duplicate Accounts" tile (cyan)
- 2 OR type "I have two UANs" / "merge my duplicate accounts" in Smart Flow

- 3 4 steps: verify → discover linked accounts (shows 2 mock UANs) → confirm merge (Form 13 note) → OTP submit

Feature 5 — Portal Status Page

- 1 Click the "SERVER STATUS: OPTIMAL" badge in the header (top-right area)
- 2 Takes you to **/status** — shows system health, subsystems, peak load advisory, UMANG alternative
- 3 Works without login (public route)

Mock test credentials used across flows: bank digits 1234 · OTP 1234
